News from ECQA®!

Autumn is here and the days are getting shorter – so enough time for reading... reading the ECQA newsletter.

ECQA Day 2024

ECQA day online: Accessibility, Sustainability and Green Business

We are happy to report about a very interesting and fruitful ECQA Online Day on 27 September 2024.

European Partners from ECQA projects showcased ECQA Accessibility and Sustainability Projects, and discussed the present and future of their projects:

- 1) What we achieved in the project (Training Materials, Certification Schemes, Certificates)
- 2) What we would wish to achieve in the future
- 3) What we would need to get there

You can find the results of our discussions and presentations here:
Results of the ECQA Day 27 September 2024

We look forward to the next ECQA days, will keep you informed about this activity, and will invite you to the next one in due time.

European Certification and Qualification Association (ECQA)

ECQA Certified Terminology Manager @ TSS2025

International Terminology Summer School 2025 with oral exams for ECQA Certified Terminology Manager

In 2025, [TermNet's International Terminology Summer School](#) will take place from 2nd to 6th June in Timisoara (Romania) and online.

We will discuss current and future terminology methods, processes and tools for professional language and terminology management in any

organization.

On Friday, 6th June, TSS participants will present their own terminology projects. This is the highlight of TSS 2025, with fascinating insights about terminology work and management in many different organizations all over the world.

The presentations also count as oral exam for the [“international terminology driving licence”](#), [the ECQA Certificate for Terminology Professionals](#).

[Super early bird with 30% discount is available until 31st December.](#)

Hope to see you in Timisoara or online in June 2025,

European Certification and Qualification Association (ECQA)

BOOK OF ABSTRACTS

SafeLMD

SafeLMD – Green and safety skills for workers in bike based urban last mile deliveries project finished successfully. All the deliverables were met and lots of interested partners were found. We are looking forward to continue with the consortium working on using the deliverables in providing knowledge and skills to workers in the bike based deliveries.

Results and free learners e-book can be found for all Modules here

(<https://safelmd.eu/en/results/>)

The training portal is up and running and has been used by a lot of interested participants, with their feedback being integrated. The same is the case for the exams of the different modules and the certification. Participants had the chance to do the training and the exam free of charge within the project lifetime and quite a nice number all over Europe has taken this opportunity.

Upskilling and certification scheme for virtual educators

VirtualEDU

Upskilling and certification scheme for virtual educators, managers and workers, finished their set of skill cards as well training material. The consortium is looking forward very much in testing the material in the upcoming piloting. The first event with lots of feedback on the material and setup was held in Timisoara, Romania in July.

ECOPRISE

Ecoprise

Ecoprise aims to promote a new entrepreneurial model and skillset for a new professional figure, the Ecoprise Designer, able to contribute to local regenerative development, promoting a harmonious coexistence between human life and nature within enterprises. The consortium agreed on a skillset and fixed the proper EQF levels of all learning objectives. Additionally the work started on the training material as well as the assessment methodology and combination of theoretical and practical works, that need to be carried out by participants.

CHAISE

The CHAISE MOOC pilot was implemented during the Spring 2024 semester at SAEK Aigaleo, targeting students specializing in IT applications with multimedia. The pilot introduced the Blockchain Developer track, offering students hands-on experience in blockchain technology. The curriculum included critical skills like cryptography, smart contract development, coding (in Solidity), and distributed network engineering. Additionally, students engaged with frontend and backend development and the creation of decentralized application (dApp coding in Solidity).

The course was structured into the MOOC modules that combined video lectures, practical exercises, and case studies, with students expected to study key components like security and digital identity outside of class. Despite the significant time demands of over 40 hours per lecture, the first five modules of the developer track were successfully delivered. These modules covered topics ranging from blockchain basics to smart contracts and consensus protocols, providing students with a strong technical foundation.

Although the final goal of developing a fully interactive dApp was not achieved due to time constraints, students gained a deep understanding of Blockchain technology fundamentals, and smart contract creation. The course's impact was positive, with most students appreciating its relevance to future job prospects. Certification exams were partially completed, with students participating in four out of eight modules due to the limited time available.
