

## Upskilling HVAC technicians on heat pump technologies for green energy transition

### About the project

The PUMP-UP project is a European initiative co-funded by the Erasmus+ programme, bringing together 7 partners from 7 European countries. It aims to develop resources applicable to heating, ventilation and air conditioning sector across the European Union addressing common training needs.

## PUMP-UP Consortium Hosts Successful 3rd Meeting in Denmark

The PUMP-UP consortium recently held its 3rd Consortium Meeting on January 23-24, 2025, in Denmark, hosted and organised with great success by CELF and their team. Representatives from seven countries - Spain, Greece, Estonia, Austria, Denmark, Belgium, and Germany - came together to discuss progress, share insights, and plan the next steps for the project.

### Key Discussions and Progress

During the meeting, consortium members dove deep into the development of online training resources aimed at HVAC technicians.

The discussions centered around several important aspects of the project, including:

- **Course Structure & Content:** The consortium refined the online course for HVAC technicians, focusing on the basics of heat pump technology and its field applications. Partners are developing engaging materials to equip technicians with essential skills.
- **Internal Piloting & External Seminars:** Partners highlighted the need for internal piloting before launching the course, and discussed hosting external training seminars to reach a wider audience.

## WHAT IS NEXT?

The PUMP-UP consortium is excited about the progress and looks forward to further collaboration. Next steps include refining training materials and develop the Massive Open Online Course.

The consortium remains committed to developing resources that support the transition to sustainable energy systems and will share updates as the project progresses.
